数強塾

次の計算をしなさい。

$$\begin{aligned}\square(1) & (+0.7) - (+0.6) + (-0.3) \\ & = 0.7 - 0.6 - 0.3 \\ & = -0.2\end{aligned}$$

$$\begin{aligned}\square(2) & -1.6 + (-1.2) + (+1.5) \\ & = -1.6 - 1.2 + 1.5 \\ & = -1.3\end{aligned}$$

$$\begin{aligned}\square(3) & 0 - (-13) - 6 + (-18) \\ & = 0 + 13 - 6 - 18 \\ & = -11\end{aligned}$$

$$\begin{aligned}\square(4) & (-13) + 8 - (-15) + (-30) \\ & = -13 + 8 + 15 - 30 \\ & = -20\end{aligned}$$

$$\begin{aligned}\square(5) & (-9) + 6 - (-14) - (+5) \\ & = -9 + 6 + 14 - 5 \\ & = 6\end{aligned}$$

$$\begin{aligned}\square(6) & \left(+\frac{1}{8}\right) - \left(+\frac{7}{8}\right) - \left(-\frac{3}{8}\right) \\ & = \frac{1}{8} - \frac{7}{8} + \frac{3}{8} \\ & = -\frac{3}{8}\end{aligned}$$

$$\begin{aligned}\square(7) & \frac{3}{5} - \left(+\frac{2}{3}\right) - \left(-\frac{4}{15}\right) \\ & = \frac{9}{15} - \frac{10}{15} + \frac{4}{15} \\ & = \frac{3}{15} \\ & = \frac{1}{5}\end{aligned}$$

$$\begin{aligned}\square(8) & \left(-\frac{3}{4}\right) + \left(+\frac{1}{2}\right) - \left(+\frac{2}{3}\right) \\ & = -\frac{9}{12} + \frac{6}{12} - \frac{8}{12} \\ & = -\frac{11}{12}\end{aligned}$$
